## **Syntax**

• Returning first 10 rows from a table:

```
SELECT *
FROM recent_grads
LIMIT 10;
```

• Filtering return results:

```
SELECT Major, Sharwomen

FROM recent_grads

WHERE ShareWomen < 0.5;
```

• Filtering results using multiple criteria:

```
SELECT Major, Major_category, Median, ShareWomen
FROM recent_grads
WHERE ShareWomen > 0.5
AND Median > 50000;
```

• Filtering results using the OR clause:

```
SELECT Major, Median, Unemployed
FROM recent_grads
WHERE Median >= 10000
OR Unemployed <= 1000
LIMIT 20;
```

• Grouping using AND and OR with parentheses:

```
SELECT Major, Major_category, ShareWomen, Unemployment_rate
FROM recent_grads
WHERE (Major_category = 'Engineering')
AND (ShareWomen > 0.5 OR Unemployment_rate < 0.051);</pre>
```

• Sorting results:

```
SELECT Major, ShareWomen, Unemployment_rate
FROM recent_grads
WHERE ShareWomen > 0.3 AND Unemployment_rate < 0.1
ORDER BY ShareWomen DESC;</pre>
```

## **Concepts**

- A database is a data representation that lives on disk, and it can be queried, accessed, and updated without using much memory.
- A database management system (DBMS) allows you to interact with a database. SQLite is the most popular database in the world.

• To work with data stored in a database, we use a language called SQL (or Structured Query Language).

## **Resources**

- W3 Schools
- SQL Zoo
- SQL Standard
